

UPHOLSTERY

Taking proper care of your new upholstered furniture will help keep it looking beautiful for many years. Over time, quality cushioning conforms to your particular shape adding a personal look to your upholstered home furnishings. Your cushions may feel firmer than those in our showroom. They will become more comfortable with each use. Please don't confuse normal softening and flattening that may occur with actual loss of foam resilience.

To keep your upholstery pieces looking their best...

- "Fluff" pillows and loose cushions with each use. Seat cushions should be flipped occasionally. (Don't forget to vacuum underneath.) To extend the life of a piece, rotate cushions whenever possible. Some "pillowtop" seating may develop comfort wrinkles which are natural and actually add to the overall casual comfort of the piece.
- Vacuum all upholstery once a week with a brush attachment.
- Pilling is normal for all fabrics when they shed their excess fiber. Using a fabric shaver will remove unwanted pills.
- Direct sunlight, heat and moisture should be kept away from upholstery as fading and discoloration may occur.
- Keep pets off furniture. Pet urine and pet body oil can be difficult to remove.
- Professionally clean your furniture once a year.
- When moving your furniture, always lift it. Please do not drag or push your furniture. This could damage your furniture and your floor.
- When a spill occurs, it is important to clean the fabric immediately. The longer a spot remains, the harder it is to remove.
- Never sit on the end of an open sleeper or arms of furniture.

LEATHER

Leather is a natural, soft, luxurious, resistant material making it an ideal choice. Each hide exhibits its own unique characteristics which are natural and proof of its individuality. Genuine leather will exhibit natural markings and variations in grain and color. Such markings are a sign of authenticity and a sign of high quality leather and not considered defects. With the right care, leather improves with age, providing many years of enjoyable use.

To maintain the rich, natural look of your leather furniture we recommend the following:

- Routinely dust and vacuum using a crevice tool in seams.
- Though leather is resistant to fading, direct, prolonged exposure to the sun will cause any material to fade. Therefore, it is important to position your leather furniture away from windows, skylights or other intense light sources when possible.
- Keep your leather furniture at least 12" away from radiators and other intense heat generators to prevent drying and possible cracking.
- Take extra care with sharp instruments and animal claws. Leather is much stronger than upholstery but will puncture with force, causing the need for a difficult repair.
- When moving your furniture, always lift it. Please do not drag or push your furniture. This could damage your furniture and your floor.
- Never sit on the arms of the furniture.
- When a spill occurs, it is important to clean the leather immediately. The longer a spot remains, the harder it is to remove.
- Never use all purpose cleaners or solvents. Clean your leather furniture only with a leather cleaner.

RECLINING FURNITURE

How to operate reclining furniture:

- As this product has many moving parts, serious injury can occur if not used properly. Keep hands, fingers and body parts away from the mechanism. To reduce the risk of head entrapment and other injuries, keep children and pets away from openings and moving parts in and around furniture. Closely supervise children and disabled persons using this product.
- Only the occupant should operate the unit. Never attempt to open the leg rest by pulling on it. Do not stand, sit or place extra weight on the arm, back or open leg rest. To safely exit the unit and prevent a tripping hazard, bring the back upright and close the leg rest.
- Never sit on the arms of the furniture.
- Use care when moving the product, always lift it. Before lifting, disconnect the electrical plug from the wall outlet and secure the mechanism to prevent unexpected opening or movement. Never move the product by the mechanism, leg rest, handle, reclining back or swivel base. Disconnect modular units. Securely grip non-moving parts only.
- Check the condition of the power transformers, electrical cords, plugs and connectors monthly. Keep the power transformer and electrical cords away from heat sources. Never operate the unit with a damaged power transformer, electrical cord, plug or connector.
- Do not allow electrical cord to be pinched between moving parts or between the frame and the floor. Do not place cord under carpet or in a location where it could become worn. Unplug the power cord immediately if you detect strange odors or fumes coming from the chair.

WOOD

Wood breathes, expands and contracts. Each piece of furniture is one-of-a-kind and will respond to changes in humidity levels in your home. Any expansion of joints or seams will revert to original shape and size as seasons change.

Because each piece of wood is unique, you can expect variations in grain appearance and stain coloration.

The following tips will help keep your wood furniture in good condition for years to come:

- Veneers, solid woods and wood finishes are easily taken care of by light dusting and periodically applying a quality furniture polish that is silicone-free.
- Do not leave wet dishes, glasses or spills on your wood furniture. Immediately wipe up any spills. Water will cause permanent damage to your beautiful wood furniture.
- Do not leave newspapers or magazines on wood. Inks can bleed onto the finish and then into the wood.
- Avoid placing furniture in direct sunlight, as it may cause fading.
- Use pads, cloth or felt to protect furniture surfaces from plastic, rubber, hot dishes, beverages, bookends, flowerpots and vases.
- A home humidifier for winter use is highly recommended for solid wood furniture.
- Most chairs are constructed using bolts that need to be tightened every few months to insure structural integrity.
- Wooden drawer guides should be treated with paraffin or candle wax for smooth operation.

MARBLE

Marble and marble veneers are natural products formed thousands of years ago. Nothing comes close to the beauty, character and uniqueness of real marble.

Real marble will vary in color, texture and pattern. You may even feel inconsistencies on the surface. These indentations are not flaws, but nature's guarantee of authenticity.

To maintain the natural beauty of your stone table, do the following:

- To clean, wipe the stone with a solution of warm water and a small amount of mild soap, then dry completely.
- Do not leave liquid in containers, porous pots or planters on the finish for any length of time. They can release moisture, causing the finish to leave a mark or ring.
- Use coasters under beverage glasses to prevent ring marks.
- Use a quality polish to help keep the luster of the natural stone.

MATTRESSES

It is important to care for your new mattress surface so that it lasts for years to come. Here are suggestions to help you protect your investment.

- The use of proper center supports for queen and king-sized bedding is required to validate your warranty. You can ensure you have the proper center support by purchasing a new bed frame with your mattress. This will safeguard the maximum benefit from your new mattress set.
- Allow your new bedding to air out. Residual odors from the manufacturing process may be present at first. They are not harmful and will go away with time.
- Use The RoomPlace high-quality washable mattress protector (cotton or fleece) to keep your mattress clean, stain-free and keep your warranty valid.
- Expect body impressions to form in the surface padding. They are normal and indicate layers are molding to your body contours.
- Take time to adjust to your new mattress. It can take several weeks.
- Do not remove the law label from your mattress. This is needed to identify your appropriate warranty coverage.
- Single-sided innerspring mattresses are designed for rest on one side only and cannot be flipped. An occasional rotation will equalize wear and extend the comfort life.
- We suggest using a boxspring from the same mattress manufacturer to validate warranty.
- We suggest the use of bunkie boards with every platform/storage bed.
